

Financial Visibility

This overview shows how to create a financial data foundation that reconciles data from a variety of sources. Teradata Vantage™ enables enterprises to automate and post timely month-end results, shorten transactional data reconciliation cycles, and streamline end-to-end front-office/back-office accounting data at various levels, covering all lines of business.

1 **Ingest** data quickly across finance structured systems and applications, external third-party providers, and semi-structured and unstructured formats in near real-time with the **Vantage data platform** and our pre-built **connectors** and **accelerators**.

2 **Leverage** a pre-built financial data model that's ready to **receive and structure data** to enable controlled, user-friendly access with a holistic 360-degree view of the enterprise

3 **Enable** data analysts, data scientists, and AI developers to build **advanced analytical** models at scale on large volumes of data, using **Vantage advanced analytic** capabilities, as well as **third-party analytic tools and languages**.

4 **Execute and manage** models with an **AnalyticOps** framework. Define financial reporting views that consumers can use.

5 **Reconcile** data from a wide variety of sources into a trusted, compliant platform that's accessible to **business users** across the organization through a suite of **BI and reporting** systems.
